

ROBOTIC TESTING ASSISTANT FOR EVERY DEVELOPER

SOFY

MOBILE APP TESTING REIMAGINED USING THE POWER OF AI

- 01 SOFY Device Management** enables setting up your device environment instantly so you can focus on testing.
- 02 SOFY Live** brings visibility to manual testing by automatically capturing your user actions, screenshots, performance data, and turning issues into bugs.
- 03 SOFY Automate** converts manual to automated tests with a click without any code and runs at scale even when your UI changes.
- 04 SOFY Robotic** detects performance and security issues, and crashes using intelligent exploration.
- 05 With SOFY Visual Quality Skills**, you can ensure your app is beautifully designed to UX design guidelines.
- 06 With SOFY**, you have a single tool to perform manual, automated and robotic testing.

WHAT CUSTOMER NEEDS DOES SOFY SOLVE?

Rapid release cycles and shrinking budgets impact app quality

Testing with Real Devices incurs cost and inhibits remote working

Manual Testing is costly, time consuming, and lacks consistency

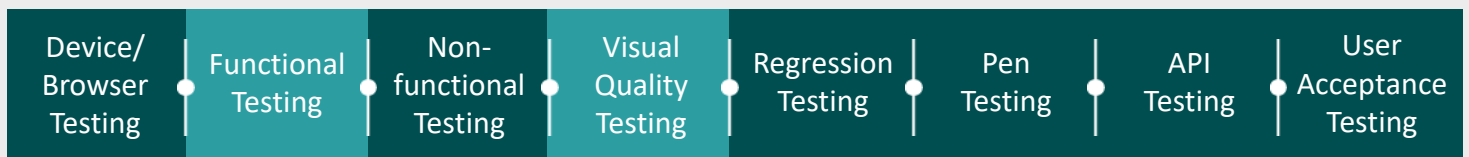

Automation requires coding skillset and lacks resiliency to UI changes

Performance, crash and UX design testing is ad-hoc and inconsistent

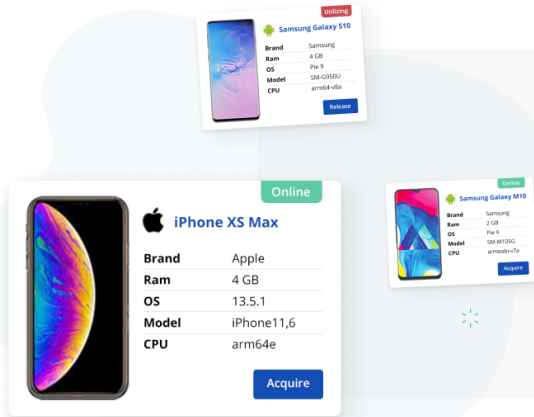

SOFY ROBOTIC TEST AUTOMATION

SOFY focuses on testing of native and web apps with a focus on UI, functional and non-functional testing.

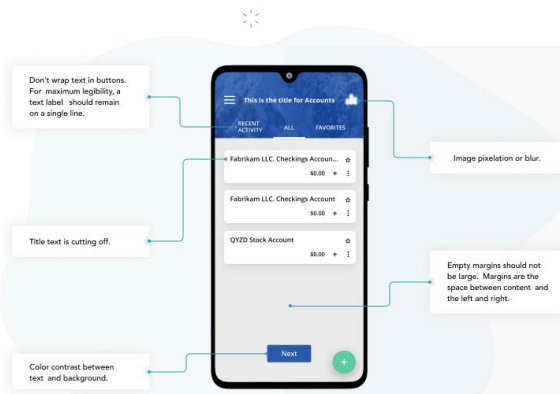

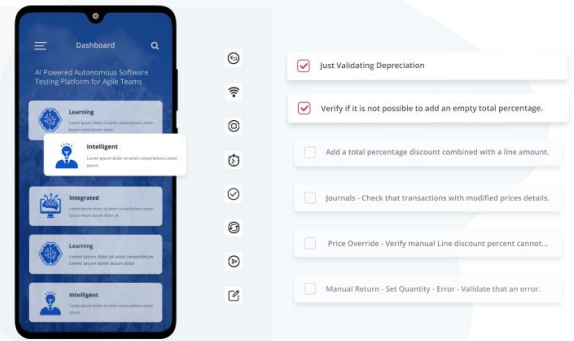

Cost of testing &
Length of time

Level of
Automation

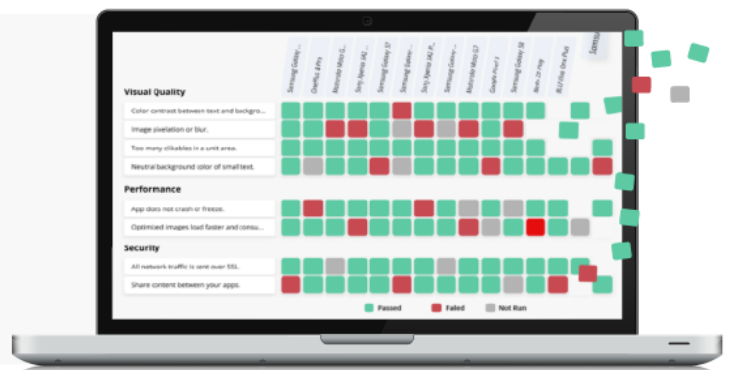

With **SOFY Live**, you can transform manual testing with automatic recording of user actions, screenshots and performance metrics. You turn issues into bugs in your issue tracking tool. Gain full visibility to tester productivity.

No Code Automation enables generating a new test by instantly converting a manual test or recording on a real device and run at scale on 100s of devices. Users can define assertion rules for validation and dynamically input test data from a file.

Test **Visual Quality** of your UX design against best practices. SOFY reports on discrepancies and suggests ways to improve your design.

Perform non-functional testing with SOFY Robotic testing and let SOFY find performance issues and crashes in your app.

REPORTING

SOFY generates Security, Performance, Visual Quality & Crash reports while providing contextual information and recommendations for fixing the problems.

DEVOPS INTEGRATIONS

SOFY integrates with popular tools like Jenkins, Jira, Azure DevOps as well as with collaboration tools like Slack and Teams.

WHAT DIFFERENTIATES SOFY?

A single platform with a consistent user experience across manual, automated and Robotic testing

A no-code testing platform that does not require source code and is resilient to UI changes and device form factors

SOFY validates the UI against 100+ UX and Accessibility guidelines and provides recommendations

SOFY supports IOS and Android Mobile App testing on Real Devices
